

Advanced Programming Practices

MTech 2026

Lab - 7

General Instructions:

- Write one .c file per problem in the assignment, renamed to RollNo_APP7_Qn.c (e.g. ABC2026001_APP7_Q1.c).
 - Every program must compile without warnings using the gcc compiler.
 - Free any memory you allocate. Programs that leak memory or access out-of-bounds indices will lose marks even if the visible output looks correct.
 - Test each program with at least one normal case, one edge case (e.g. size 0 or 1, all-equal elements), and one larger randomly generated case.
 - Submit all the .c files on Google Classroom before the due time, any late submissions will be penalized or discarded.
-

1. Write a menu-based program for creation, insertion at beginning, at end or at given location, deletion from beginning, from end or from given location, and traversing of singly circular linked list.
2. Write a menu-based program for creation, insertion at beginning, at end or at given location, deletion from beginning, from end or from given location, and traversing of doubly linked list.
3. Write a menu-based program for creation, insertion at beginning, at end or at given location, deletion from beginning, from end or from given location, and traversing of doubly circular linked list.
